

R&D Facility Confirmation @Qualis Indonesia

EMD Management conducted a **genba visit to confirm Qualis'** evaluation capabilities as a resin material development partner. **Qualis has facilities to perform cut-body and vibration testing** inside a thermal chamber.

MATERIAL GOES TO LOTTE CHEMICAL

RESIN LOCALIZATION INITIATIVE

On 19-21 August 2026. Material Engineering visited Lotte Chemical's Cilegon & Cikarang Plant to explore its potential for supporting resin localization.

As the next step. Material Engineering aims to accelerate **the localization process, targeting to apply in T-D Project (D90N/91N)** through the use of locally sourced resin.

EMD QCP as 2nd Winner in QCC Grand Convention 2026

After decades of struggle, EMD finally secured 2nd place in QCP at QCC Company, driven by strong collaboration between Management, the QCC Promotion Team led by Lutful, and the VPE-PBMD Team (Nico, Danang & Odel).

RECYCLE 101

Feasibility Study with **Amiga Polimer Indonesia** for Recycled Plastics

Taking the first step toward circularity, Material Engineering kicked off its recycled plastics study with a plant visit to Amiga Polimer Indonesia, assessing its process and capabilities. With more suppliers to explore, the team is taking the first steps toward recycled vehicle parts and a circular economy.

NATURAL FIBER DEVELOPMENT

Nature proves its potential!

From a Good Old Coconut

TMMIN starts to promote natural material implementation, **coco fiber is being developed as a substitute for glass wool** in the insulator hood. **The trial with Tier 1 Part Maker Candidate achieved 50% better cycle time.** Appearance has been confirmed OK, further testing will be conducted to confirm performance.

ENABLING WFH

In preparation for full WFH in September, TP strengthened remote access through a common folder with PuD and Global Protection installation across EMD PCs. **TP & TMC-EDC successfully cleared WARD System delivery errors**, enabling 553 RDDPs and 4,143 Drawings to be delivered.

Honda Super-ONE

This Honda's front grille uses **recycled materials sourced** from discarded Honda bumpers. This innovative technology not only introduces a new approach to automotive design but also supports carbon neutrality and environmental sustainability.

AN INSIGHT FROM GIIAS

2026
